

100 Modules

Some of these modules fall into multiple categories but are only listed in one.

Views

Views - The Views module provides a flexible method for displaying content.

<http://drupal.org/project/views>

Views Attach - provides two additional Views display plugins, "Profile" and "Node content". These displays do not display on a page but get "attached" to either a user page or nodes of specified types.

http://drupal.org/project/views_attach

Views Excel Export - export Views data to Excel

http://drupal.org/project/views_export_xls

Views Bulk Operations - bulk operations to be executed on the nodes displayed by a view (delete all)

http://drupal.org/project/views_bulk_operations

Views Gallery – Photo gallery feature

http://drupal.org/project/views_gallery

Views Rotator – rotate through view items (good for ads)

http://drupal.org/project/views_rotator

Views Slideshow - slideshow of any content

http://drupal.org/project/views_slideshow

Views Carousel – slideshow based on the jCarousel jQuery plugin

<http://drupal.org/project/viewscarousel>

jCarousel - allows developers and themers to make use of the jCarousel jQuery plugin

<http://drupal.org/project/jcarousel>

Calendar - display any Views date field in calendar formats

<http://drupal.org/project/calendar>

GMap Module – interface to the Google Maps API

<http://drupal.org/project/gmap>

CCK/Content Display

CCK - add custom fields to nodes

<http://drupal.org/project/cck>

Link – link field type

<http://drupal.org/project/link>

Imagefield - image upload field type

<http://drupal.org/project/imagefield>

Filefield - universal file upload field

<http://drupal.org/project/filefield>

Date - date/time field type

<http://drupal.org/project/date>

Email – email upload field type

<http://drupal.org/project/email>

Location – adds geographic locations fields to nodes

<http://drupal.org/project/location>

Node reference url - node reference field type

http://drupal.org/project/nodereference_url

Event – content type for events

<http://drupal.org/project/event>

Event Repeat – Repeating events

<http://drupal.org/project/eventrepeat>

FAQ – content type for faqs

<http://drupal.org/project/faq>

FAQ Ask – allows users to ask question and have roles as monitors

http://drupal.org/project/faq_ask

Scheduler – published nodes on specified dates

<http://drupal.org/project/scheduler>

Signup - allows users to sign up (or register, as in register for a class) for nodes of any type

<http://drupal.org/project/signup>

Panels - create customized layouts

<http://drupal.org/project/panels>

Popups Api – API for building modal ajax dialogs

<http://drupal.org/project/popups>

Total Control - Admin panels

http://drupal.org/project/total_control

Webform - adds a webform nodetype

<http://drupal.org/project/webform>

Search 404 - Performs a search on the keywords

<http://drupal.org/project/search404>

Quick Tabs - allows you to create blocks of tabbed content

<http://drupal.org/project/quicktabs>

Vertical Tabs - Provides vertical tabs on the node add form

http://drupal.org/project/vertical_tabs

Add to Any Share/Save/Bookmark Button - widget to allow readers to share content with social networking services

<http://drupal.org/project/addtoany>

FCKEditor - replace textarea fields with a visual HTML editor

<http://drupal.org/project/fckeditor>

Wysiwyg - allows you to use client-side editors

<http://drupal.org/project/wysiwyg>

IMCE - image/file uploader

<http://drupal.org/project/imce>

Images/Media

imageapi – required by other modules

<http://drupal.org/project/imageapi>

Imagecache – set presets for image processing

<http://drupal.org/project/imagecache>

Slideshow - slideshow transforms images attached to a post into a JavaScript enabled slideshow

<http://drupal.org/project/slideshow>

Gallery

<http://drupal.org/project/gallery>

SWF Tools - embed flash content on your pages

<http://drupal.org/project/swftools>

Image FUpload - ability to upload multiple images

http://drupal.org/project/image_fupload

Thickbox - webpage UI dialog widget

<http://drupal.org/project/thickbox>

Lightbox - script used to overlay images

<http://drupal.org/project/lightbox>

Comparison of Lightbox-type modules

<http://drupal.org/node/266126>

Development

Devel – a bunch of helpful modules useful when building the site

<http://drupal.org/project/devel>

Coder - assists with code review and version upgrade

<http://drupal.org/project/coder>

Deadwood - automate as much as possible the task of updating a contributed module

<http://drupal.org/project/deadwood>

Schema - allows modules to declare their database tables in a structured array

<http://drupal.org/project/schema>

Backup and Migrate - simplifies the task of backing up and restoring your Drupal database

http://drupal.org/project/backup_migrate

Advanced Help - allows module developers to store their help outside the module system, in pure .html file

http://drupal.org/project/advanced_help

Drupal for Firebug - helper module for that displays Drupal debugging and SQL query information in Firebug

<http://drupal.org/project/drupalforfirebug>

Masquerade – switch users

<http://drupal.org/project/masquerade>

Utilities

Token - small bits of text that can be placed into larger documents via simple placeholders

<http://drupal.org/project/token>

Path Redirect - specify a redirect from one path to another path or an external URL

http://drupal.org/project/path_redirect

Pathauto - generates path aliases automatically

<http://drupal.org/project/pathauto>

Flag – Flagging system for content

<http://drupal.org/project/flag>

rules - define conditionally executed actions based on occurring events (workflow)

<http://drupal.org/project/rules>

String Overrides - provides a quick and easy way to replace any text on the site

<http://drupal.org/project/stringoverrides>

Chaos tool suite - set of APIs and tools required by other modules (Panels) allows for wizardry.

<http://drupal.org/project/ctools>

jQuery UI - A wrapper module around the jQuery UI effects library

http://drupal.org/project/jquery_ui

Context - manage contexts for different portions of your site then do things based on what context you are in

<http://drupal.org/project/context>

Features – collection of Drupal entities (views, contexts, CCK fields, imagecache presets)

<http://drupal.org/project/features>

Spaces – allows features to be enabled and customized in different spaces

<http://drupal.org/project/spaces>

Admin Message - an easy way to show short messages to users

http://drupal.org/project/admin_message

Menus/navigation

Admin – admin UL similar to D7

<http://drupal.org/project/admin>

Admin Menu – quick menu interface to administrative tasks

http://drupal.org/project/admin_menu

Nice Menus – expandable menus

http://drupal.org/project/nice_menus

Custom Breadcrumbs – custom breadcrumbs for node types, views, panels etc

http://drupal.org/project/custom_breadcrumbs

Menu Breadcrumbs – creates breadcrumbs based on the menu of the page

http://drupal.org/project/menu_breadcrumb

Access Control

Access Control List (ACL) - API for other modules to create lists of users and give them access to nodes

<http://drupal.org/project/acl>

Content Access - manage permissions for content types by role and author

http://drupal.org/project/content_access

Forum Access - allow you to set forums private

http://drupal.org/project/forum_access

SEO

Nodewords –adds meta tag fields to nodes, views, panels

<http://drupal.org/project/nodewords>

Page Title – customize the <title> tag for each node

http://drupal.org/project/page_title

Site map - creates a sitemap page based on menus and taxonomy

<http://drupal.org/project/sitemap>

Xmlsitemap - creates a xml sitemap

<http://drupal.org/project/xmlsitemap>

Google Analytics - Adds the Google Analytics web statistics tracking system to your website

http://drupal.org/project/google_analytics

Tagadelic - generates a page with weighted tags

<http://drupal.org/project/tagadelic>

User

User Points - an API for users to gain or lose points for performing certain actions on your site

<http://drupal.org/project/userpoints>

User Points Contributed Modules – Collection of modules used by UserPoints

http://drupal.org/project/userpoints_contrib

User Points Nodes and Comments - grant points to a user for comments

http://drupal.org/project/userpoints_nc

Ubercart Userpoints – earn points when buying products and use points to buy products

http://drupal.org/project/userpoints_ubercart

Content Profile - user profiles as content

http://drupal.org/project/content_profile

Ecommerce

Ubercart - e-commerce suite

<http://drupal.org/project/ubercart>

Ubercart Discount Coupons – add coupons to use during checkout

http://drupal.org/project/uc_coupon

Ubercart Fee – add additional fees to products

http://drupal.org/project/uc_fee

Ubercart Restrictions – restricts certain products and users based on location, age, etc

http://drupal.org/project/uc_restrictions

Secure Pages - required pages to a SSL

<http://drupal.org/project/securepages>

Ubercart

<http://www.ubercart.org>

Spam

CAPTCHA - challenge-response for web forms

Mollom – solution for spam by Dries

<http://drupal.org/project/mollom>

Spam and Drupal

<http://groups.drupal.org/node/26730>

Organic Groups

Organic Groups - enables users to create and manage their own groups

<http://drupal.org/project/og>

OG Block Visibility - specify that a block should be visible only within a selected group

http://drupal.org/project/og_block_visibility

OG Menu - create and assign a menu to a specific group.

http://drupal.org/project/og_menu

Internationalization

i18n - content translation

<http://drupal.org/project/i18n>

Language Icons - provides icons for language links

<http://drupal.org/project/languageicons>

Translation Table - UI for quick translation of taxonomies and menus

http://drupal.org/project/translation_table

Other

Drupal for Facebook - set of modules and themes turns Drupal into a platform for developing Facebook Applications

<http://drupal.org/project/fb>

Voting Api – rating content

<http://drupal.org/project/votingapi>

Fivestar – add voting widget to nodes

<http://drupal.org/project/fivestar>

Subscriptions – enables users to subscribe

<http://drupal.org/project/subscriptions>

Simple News – publishes and sends newsletters to lists of subscribers

<http://drupal.org/project/simplenews>

Mime Mail – html emails

<http://drupal.org/project/mimemail>
